MATERIALS & **FINISHES**

In order to make the top quality showcases, you need to use the best materials available today. We constantly source new materials, parts and finishes on a daily basis to keep up with the fast evolving industry. Once tested, these new innovations are added to everything else we offer. Next to our own research, we work together with suppliers that share our passion for quality and innovation.

Custom Exhibit Group is very flexible when it comes to project with certain requirements. Tell us if you already have materials that you would like to work with. Chances are, we already know it, and if we don't, we do like a challenge!

Aluminum

All of our extrusions are made of a high quality tempered aluminum alloy called 6063-T5.
Aluminum properties:
• Naturally resists corrosion, even more with anodic coating
• Readily available and cheaper than steel
• Best strength-to-weight ratio of any metal
• Wide range of finishes available
• 100% recyclable

Custom Aluminium Options:
Among the available finishes are: powder coatings (any colour) and anodized with optional textures.

Glass

Glass will allow your displayed items to be viewed while restricting access to them. It will also give the display a more exclusive appearance, combined with excellent lighting that will create a sparkling effect. This will attract more customers to your display.

Custom glass options:
• Glass shelves may be as thick as 25mm
• For display glass inserts (sides, tops, backs, etc.) we use clear float glass with flat polished edges.
All glass inserts are available tempered for safety
• Coloured glass is available in all thicknesses as well. Colour matched and various finishes are available (opaque, translucent, metallic, pearl)
• Low-iron Star-fire glass is available in thicknesses up to 19mm.
• This glass greatly reduces the green tint seen in normal float glass
• Other glass products are available such as mirror, laminated and patterned glass.

Substrates

Our extrusion system allows us to use any substrate available on the market. Therefore, we are able to work with any supplier of melamine and laminate. This gives us freedom to create exactly the custom design you are looking for. We can offer any of the following types of substrates:

• Particle board/melamine
• MDF (Medium Density Fibreboard)
• Plywood
• Acrylics/plastics
• Engineered materials (honeycombed plastics or aluminium)
• Solid wood
• Glass & mirror
• MDO (Medium Density Overlay)
• Many more subtrates to choose from

Custom Substrate Options:
Choose any of the thousands of finishes available on the market.

Toll Free: (877) 923-3848 FOLLOW US LIVE CHAT

Plastics

We use plastics for several purposes in your system. The types of plastics we offer are vinyl and acrylics. They are used for of glass battens, door channels and other components. We also use plastics for signage, backlighting, and display case panels. We work with several suppliers who can supply us with any custom solutions such as display item stands, and other product specific requirements.

Custom Plastic Options:
Choose any of the thousands of finishes and colours available on the market.

Fabrics

We use high quality fabrics in our cases for several purposes such as: finish options for corkboard panels, jewellery beds etc. Some fabrics such as Pacific Silver Cloth aid in the preservation of valuables.

Custom Fabric Options:
For other applications please consult our designers.

Graphics

There is nothing more important for your branding strategy than good exposure to your customers. Therefore we have all the resources necessary to incorporate your branding into the custom design. We can print all the graphics ourselves or, if desired, you can send us your graphics and we will apply it to the product.

Custom Graphic Options:
We can print any of your graphics in vinyl colours, full colour Dura-trans and apply it on backlit signage, flip-frames for easy changing graphics, and of course on the glass and substrates.

LIGHTING

At Custom Exhibit Group we spend more of our research and development time on lighting. This is partly because of the importance of lighting in quality displays but also because the lighting industry is rapidly advancing. Many lighting technologies have come and gone, and we have worked with all of them, including technologies such as fiber optic and holographic. Sometimes it is important to think outside of the box when it comes to lighting, especially in museum and other exclusive applications. Most lighting solutions answer three needs; colour of light, intensity, and coverage. Further concerns include longevity, availability, temperature, energy consumption, and ease of use. The reality is that cheap is almost always bad in lighting. Rest assured however, there are options. In this chapter we will describe some of the advantages and disadvantages of the two most commonly used light types; fluorescent and light emitting diodes (LED).

How to use lighting in your showcase depends on what you need to display. You can light from the top down, bottom up, or from the sides. You can also use a combination, which gives a better result. The extrusion profiles of our cases allows us to hide the wiring for a cleaner appearance. Light bars can be made in any length, and we can help figure out how much or little light you need. We are confident that we have the best lighting solutions available.

LED Light Fixtures

LED technology has been advancing at a staggering rate and is now of equal, or even in some cases higher performance than conventional lighting. Because of the great leap in technology, we now have selected LED as our standard lighting solution.

LED advantages:

• Life span between 50,000 to 100,000 hours
• Durable, they have no filament and are shock resistant
• Extremely energy efficient, 80% of energy is converted to lighting
• Very little heat output
• No UV radiation
• Very high watt to lumen ratio

Disadvantages:

• Higher initial cost compared to existing conventional technologies
• Lower light output

Fluorescent Light Fixtures

Fluorescent advantages:

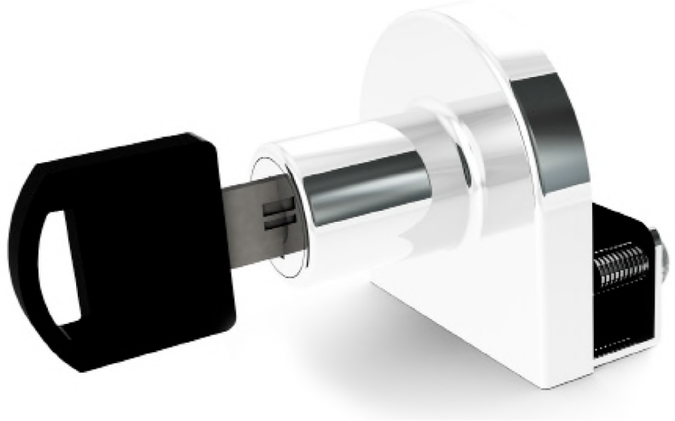

• Up to 66% cheaper than incandescent lighting while providing the same amount of light • Lasts six times longer than incandescent
• Little heat output

Fluorescent Disadvantages:

• Higher initial cost
• Light tube may flicker near the end of it's life
• Mercury content

LOCKS & **SECURITY**

If it were not for the need of security, there would be no glass cabinets. Therefore, locks are standard in all Custom Exhibit Group. Regular locking mechanisms need to be easy to use, easy to maintain, and need to make the case relatively tamper resistant. Keeping out professional thieves requires more complicated and expensive measures, and these are typically used in museum applications. Some high security features may include: locks with a unique key number registered to the client, security film applied to the glass interior (to prevent smash and grabs), and electronic monitoring.
Standard locks are used in all displays unless specified otherwise. To satisfy special security concerns or specifications, we may also provide locks from any manufacturer, including Kenstan and Abloy. Please contact our design team to discuss all your concerns regarding security.

Depending on the manufacturer, different options may be available:

- Various finishes and colours
- Key control (registered key numbers, specific to store or department)
- Controlled duplication of key numbers
- Key retaining vs. non-key retaining (key retaining locks prevent the
key from being removed unless the lock is engaged)
